Photosynthesis

3. Nightfall, changes in climate, or the growth of other organisms that block the Sun are possible answers.

1. Plants and some bacteria obtain energy from the Sun through photosynthesis.

2. Organisms that obtain energy from the Sun share the energy through the food chain.

1. What organisms obtain energy directly from the Sun?
2. How might organisms share energy that they obtain from the Sun with other organisms?
3. What might stop a living, healthy plant or bacteria from obtaining energy from the Sun?
