

1. All human communities also contain plant, animal, protist, and bacteria life.
2. Some examples of interaction include pet ownership, gardening, hiking, fishing, or hunting.
3. The space limitations posed by the water could be considered a limiting factor to growth and food resources or as a positive source of income from tourism.

1. Thousands of people live in the community shown in the photo. What are some of the other living residents?
2. What are some ways people might interact with other living organisms in this community?
3. Are there any environmental factors that might shape or limit how this community functions?
