1. The suit's main purpose was to provide protection from attack.
2. The joints allowed for movement and provided some degree of flexibility in the armor.
3. The exoskeleton provides protection from elements and predators and is jointed to allow for movement.

1. What was the purpose of this suit of armor?
2. What purpose did the joints in the armor serve?
3. How is a suit of armor like an arthropod's exoskeleton? How is it different?
