

1. News, entertainment, and sports can be received through satellite dishes.
2. Radios, televisions, computers, telephones, newspapers, and other people are possible sources.

3. There might not be as wide a selection of information options, and some of the information would be in different format (i.e., printed or audio only) rather than visual and audio together.

1. What information might people receive through a television satellite dish like this one?
2. How might people obtain information if the satellite dish were broken?
3. How might information obtained through a television satellite dish be different from information obtained from other sources?
