

Bellringer 102 The Excretory System

3. Answers will vary. Students should understand that, like a sanitation system, the human excretory system helps to prevent waste buildup and maintains health.

1. Answers will vary. Students should understand that removing waste creates a more pleasant, better functioning, and more healthful environment.

2. Answers will vary. Students might suggest that waste would accumulate, and unhygienic, unhealthy circumstances would result.

1. Why is it important for waste and garbage to be cleaned up every day?
2. What do you think might happen if the people who ensure that waste is removed went on strike?
3. How would you compare the human excretory system to a waste disposal system?
