

3. A person might become malnourished, lose proper body function, and need medical attention.

1. Food provides nutrients that the body uses to function.
2. The mouth, teeth, esophagus, stomach, and intestines are important for digestion.

1. What is the purpose of eating?
2. What are some parts of the body involved in the process of converting food to energy?
3. What might happen if one of the body parts involved in digestion were unable to function?
