1. Answers will vary. Obvious physical characteristics include hair color or skin tone, as well as differences in gender and size.

2. Answers will vary. Students should understand that the human method of reproduction allows each parent to share genetic information with, and pass desirable traits to, their offspring.

1. In what ways do the children in the photo resemble their parents?
In what ways do they differ?
2. Why do you think human reproduction requires two parents?
3. What is the purpose of males and females having different reproductive systems?
